Eslora (E23L.16447)

- Resistance to CGMMV, powdery mildew, yellowing and yellow veins. Intermediate resistance to ToLCNDV.
- Most resistant variety for cool season production and a standout for better post-harvest and shelf-life associated with high quality of fruit.
- Strong open plant, vigorous in winter.
- Generative and good balance.
- A solid balance between growth, fruit setting and production, throughout the entire cultivation period.
- The crop requires some generative cultivation to promote the selectivity and openness of the crop. The result is a high quality product.
- Fruit length: 32-34 cm.
- Australian Transplant Period: April to August (week 15-35).
